

Renal Ultrasound Scan Preparation

Please ensure you have a full bladder for this scan. Drink 1 ½ pints (850 mls) of water or squash 1 ½ hours before your appointment time. Try not to empty your bladder once you have started drinking.

Female patients – please note that it may be necessary to perform an internal ultrasound investigation; this will be discussed with you at the appointment.

Please also read the Ultrasound Service Information Leaflet, for further information about our service and what to expect. It is important that you arrive promptly otherwise your appointment may need to be rearranged.
